## 2015 Consumer Confidence Report

Water System Name:	Tecate Point of Entry	Repor	t Date:	5/29/2016
O	1 , ,	1 2	U	al regulations. This report shows include earlier monitoring data.
Este informe contiene entienda bien.	información muy import	ante sobre su agua potable.	Tradú	zcalo ó hable con alguien que lo
Type of water source(s)	in use: Dual source gro	undwater		
Name & general location 405 Tecate Road Tecate	on of source(s): 3710048 e, CA	-001; 3710048-003		
Drinking Water Source	Assessment information:	Source assessments were co and are available upon reque		in July 2005 and April 2016
Time and place of regu	larly scheduled board meet	ings for public participation:	none	
For more information	contact. CSA Office Attor	tion Drion Aon Dh	one: (	619 ) 241-3566
Tot more imprimation,	contact: GSA Office Atter	mon phan Asp – Fil	ione. (	017 / 241-3300

#### TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Primary Drinking Water Standards (PDWS)**: MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

**Secondary Drinking Water Standards (SDWS)**: MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

**Treatment Technique (TT)**: A required process intended to reduce the level of a contaminant in drinking water.

**Regulatory Action Level (AL)**: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Variances and Exemptions**: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

**ND**: not detectable at testing limit

**ppm**: parts per million or milligrams per liter (mg/L)

**ppb**: parts per billion or micrograms per liter (μg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

**ppq**: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

#### Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 7, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA								
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of months in violation		M	MCL		Typical Source of Bacteria	
Total Coliform Bacteria	(In a mo.) <u>0</u>	0			More than 1 sample in a month with a detection		Naturally present in the environment	
Fecal Coliform or <i>E. coli</i>	(In the year)	0		repeat san total colifor sample also	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		Human and animal fecal waste	
TABLE 2	TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER							
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of samples collected	90 <sup>th</sup> percent level detecte	exceeding	AL	PHG	Typical Source of Contaminant	
Lead (ppb)	6/7/2013	2	ND	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits	
Copper (ppm)	6/7/2013	2	0.145	5 0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS								
Chemical or Constituent (and reporting units)	Sample Date		Level 1 Detected D		MCL	PHG (MCLG)	Typical Source of Contaminant	
Sodium (ppm)	8/29/2011	64.4		NA	none	none	Salt present in the water and is generally naturally occurring	
Hardness (ppm)	11/2/2012	348		NA	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring	

<sup>\*</sup>Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 4 – DET	ECTION OF	CONTAMIN	ANTS WITH A	PRIMARY	DRINKING	WATER STANDARD	
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Nitrate as N, mg/L						D (C 11 1; C C (;)	
Well 001	2015	6.42 (Avg)	1.22 to 21.6	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits	
Well 003	2015	1.53 (Avg)	0.79 to 2.27	10	10	se mage, erosion or matarar deposits	
Fluoride (mg/l)	12/10/2015	0.150	NA	2	1	Naturally occurring	
THM's (ppb)	8/26/15	86	NA	80	NA	Byproduct of drinking water disinfection	
HAA5 (ppb)	8/6/15	37	NA	60	NA	Byproduct of drinking water disinfection	
Gross alpha, pCi/L	8/29/2011	7.87	NA	15	(0)	Erosion of natural deposits	
Uranium, pCi/L	8/29/2011	6.33	NA	20	0.43	Erosion of natural deposits	
TABLE 5 – DETE	TABLE 5 – DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD						
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant	
Specific Conductance, uS	8/29/2011	996	NA	1600	NA	Sum of ions present in the water	
Chloride, mg/L	8/29/2011	134	NA	500	NA	Erosion of natural deposits	
Sulfate, mg/L	8/29/2011	40.5	NA	500	NA	Erosion of natural deposits	
Zinc, mg/L	8/29/2011	0.06	NA	5	NA	Erosion of natural deposits	
TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notifica	tion Level	Health Effects Language	
Calcium, mg/L	8/29/2011	97.3	NA	NA		NA	
Alkalinity, mg/L	8/29/2011	260	NA	NA		NA	
Magnesium, mg/L	8/29/2011	35.5	NA	NA		NA	

<sup>\*</sup>Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

### **Additional General Information on Drinking Water**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

# Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT							
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language			
Nitrate in Well 1 routinely exceeds the Maximum Contaminant Limit (MCL)	Nitrate is present in the groundwater supplied to Well 1. Sources include runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits	The nitrate MCL was exceeded in April and July of 2014. Original Citation issued in October 2012 for nitrate MCL violation occurring in August 2012. GSA Tecate remains operating under the directives of the citation until compliance with the nitrate is achieved.	Notify CDPH and post Do Not Drink notice. Provide bottle water.  Tecate Point of Entry installed a new well for use in the potable water system.  Tecate Point of Entry has removed Well 1 as a source of supply for the potable water system.	Infants below the age of six months who drink water containing nitrate in excess of the MCL may quickly become seriously ill and, if untreated, may die because high nitrate levels can interfere with the capacity of the infant's blood to carry oxygen. Symptoms include shortness of breath and blueness of the skin. High nitrate levels may also affect the oxygen-carrying ability of the blood of pregnant women.			

Nitrate in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.
